

Eco Consulting is not the only specialist that provides this service on behalf of Puget Sound Energy. But we are the best, completing more assessments than any other company. Since being founded in 2012 Eco Consulting has won PSE's *Energy Efficiency Leader Award* for the top specialists providing this service every full year in service. We are the only company that has received this award two years running.

Stephen Bay of Eco Consulting accepting "Energy Efficiency Leader Award"

Our motto is - **No Sales. Just Consulting.**

In order to provide our customers with the best service possible, we do not sell any additional services or products. We DO NOT use this service as a way to sell other services. Our auditors are not incentivized to sell. This means no high pressure sales (or sales of any kind) while Eco Consulting is in your community.

### What is a HomePrint?

A HomePrint Assessment is one of Puget Sound Energy's rebate to help their residential customers be more energy efficient.

The assessment takes about 45 – 90 minutes depending on how many questions the resident has and how many free LEDs we install.

Our Nationally certified energy inspectors will look at the home's appliances, insulation, and heating system to give residents information on options to reduce their energy consumption.

Our auditors will install up to 20 LEDs during the assessment and leave behind up to 2 energy efficient showerheads, along with kitchen and bath aerators.

### Why would PSE want to give customers FREE LEDs?

If you go to any retail store in PSE territory you will see PSE rebates on the LEDs in the store. PSE also provide rebates on a variety of appliances as well. The reason PSE provides these rebates is to incentivize customers to be energy efficient. By reducing energy consumption in the home, PSE reduces the amount of investment needed to upgrade infrastructure (powerlines, power plants) This is one of those rebates. There are no catches.

### Why use Eco Consulting for this PSE Rebate?

It's a no brainer to sign up your community for this PSE rebate. It's free, your community residents will receive up to 20 LEDs, and residents will leave this service with a better understanding of their home. But why Eco Consulting?

- Eco Consulting has won the award for the best HomePrint contractor two years running
- Eco Consulting has completed over 4,000 of these HomePrints with ZERO customer service complaints.
- Eco Consulting does not sell any products or services during the assessment. Other contractors do.
- Eco Consulting has installed over 90,000 LEDs with this program in over 5,600 homes. Those customers save an estimated 2,900,000 kWh hours per year resulting in \$320,000 reduction in utility bills.
